THE TIMES of last week contained some excellent diagrams showing the location of the vaults and the wells from which the city receives her water supply, and a summary of Stanley Parkill's investigations of the same. A creditable piece of work for THE TIMES, but not a creditable showing for the city. —A little daughter of Thomas Gadola, was hit in the shoulder by a stray bullet Saturday morning. The above Eye Glass, invented by the JOHNSTON OPTICAL CO., of Detroit, Mich., combines the best features of all others.

1st—The lenses can be placed far enough away that the eye lashes will not touch them, a thing not always easy to do with other eye glasses.

2d—The guards are set so as to clasp the nose back under eye brows which prevents slipping and falling off.

3d—The pressure is on the fleshy part of the nose above the bone, which prevents irritation.

4th—The lever feature secures its perfect adjustment to the nose whether large or small.

5th—The lenses are set at right angles to line of vision.

6th—They can be worn safely without cord or chain as there is no danger of falling off.

7th—We warrant them to be the easiest eye glass in the market.
